

Electric Boom Lift Attachment

Electric Boom Lift Attachments - Type "E" forklifts meet the minimum standards for electrical hazards and fire. This is the most common description utilized for electric lift trucks. Forklifts labeled type "E" cannot be used in hazardous sites. Type "ES" lift trucks meet all the standards of Type "E" lift trucks and have other tools in order to stop the emission of sparks and limit the surface temperature of forklift components.

Type "ES" forklifts are more specialized and are not normally obtainable. Type "EE" lift trucks meet all the standards of Type "E" and "ES" trucks and have all electric motors and spark producing electrical parts completely enclosed in view of the fact that Type "EE" trucks are normally utilized anywhere a dangerous environment has been identified. Type "EX" lift trucks are specially designed for use in environments wherever vapors or flammable fibers or dust can be present. These types of forklifts are made using no spark generating components together with various protective measures so as to guarantee optimum safety in the risky applications they may be utilized for.
