The U.S. lift Truck division situated in Cleveland has a expert team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Initially the home-based forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled lift trucks as part of a home-based machinery expansion project. Product sales of these products were originally targeted to state-run corporations, large scale businesses, and the military. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical education became the new focus for enhancing quality and product development.

Daewoo began the first home-based forklift business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological improvements combined with sales success placed them in a position of significant expansion of their forklift business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the highly competitive North American materials handling industry. This project proved highly successful for Daewoo and their lift truck product sales expanded greatly. In 1984, the company completed development of a new facility to help in producing high end value-added products for export. In 1993, the corporation had a international sales network and started exporting versions they had developed through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into international marketplaces.
