

JLG Forklift Part

JLG Forklift Parts - In the late 1960's John L. Grove, with his wife Cora embarked on a cross country trip in their RV. Newly retired, after spending many years working with his brother to manufacture their crane business into an industry leader, John had no idea that momentous trip would permit JLG Industries, Inc to emerge. The world leader of mobile aerial work platforms and precision materials handling technologies was the end consequence of a road expedition.

Whilst on their trip, John spent time conversing with former business associates whom the Groves stopped to see along the way. These conversations combined with a tragic incident-two workers being electrocuted on scaffolding when the Groves were traveling to the Hoover Dam- John uncovered a considerable market for a product that could promptly and safely elevate people in the air to accomplish maintenance and other construction services.

Upon returning from their travels, John established a partnership with two friends and purchased a metal fabrication company in McConnellsburg, Pennsylvania. In 1970, starting operations with a crew of twenty employees, they created and sold the first JLG aerial work platform. The company incorporates some of the simple design elements of that original lift into existing designs.

JLG forklifts have come a long way since Mr. John L. Grove came back to town from his cross-country road trip and since the first aerial work platform debuted on the market. Nowadays, the company proudly continues to expand itself into different markets worldwide and develops new products to make certain clients are capable of being more efficient and perform in the workplace within a safer atmosphere.
